CONTRACT GROWING, SIMPLIFIED.

PLUMENET

KNOW YOUR FLOCK. PROVE YOUR WORK. GET PAID ON THE NUMBERS.

Running contract flocks means a hundred small records a day, and a contract that judges every one. PlumeNet keeps those records straight, tells your team what is due before it is missed, and gives you the evidence when the settlement is on the table.

SIX BENEFIT BLOCKS

Works in the shed, not just the office

The handset app works with no signal at all. Farm handlers log mortality, feed and weights on the spot; everything syncs when they are back in range.

Always know what's due next

The app shows each house what is due and when, and flags a missed check the same day.

Catch problems while the birds can still be helped

Temperature, humidity, water and mortality readings are checked.

Your contract, in plain view

Every obligation your contract sets is listed, with how often and how strictly.

Your numbers, ready for settlement

Weekly performance against the breed standard, feed fed against budget, mortality by cause, running FCR and an estimated EPI.

One view across every farm

Birds on farm, mortality, houses in cycle and what needs your decision today — across all your farms in a single dashboard.

CONSISTENT DATA FROM EVERY GROWER. CONTRACT TERMS THAT ARE ACTUALLY FOLLOWED.

Every grower records things a little differently, and a contract is only as good as the evidence behind it.
PlumeNet captures the same data, the same way, on every farm and reports it against the terms you signed.

SIX BENEFIT BLOCKS

Like-for-like across growers

One global definition for every metric, so a house in one province can be compared fairly with a house in another.

Obligations checked, not assumed

Every metric it addresses is listed with its required frequency and a verdict met, missed, late, excused or off-band.

See the flock before the truck arrives

Flock status and harvest forecast show what is due to be caught, and the expected weight two ways.

A clean story on transit losses

Every load is recorded at the gate and again at the shed: arrival time, gate deaths, shed deaths and culls kept as separate counts.

Audit trail you can rely on

Corrections to logged figures go through two-stage approval and are recorded as corrections — never silent edits.

Your data stays yours

Each integrator sees only its own houses and cycles — including historical ones after a house moves to another contract.
